TITLE	County Data Book 1995: Kentucky Kids Count.
INSTITUTION	Kentucky Kids Count Consortium.; Kentucky Youth Advocates, Inc., Louisville.
SPONS AGENCY	Annie E. Casey Foundation, Baltimore, MD.
PUB DATE	Dec 95
NOTE	263p.; For 1994 edition, see PS 024 870.
AVAILABLE FROM	Kentucky Youth Advocates, Inc., 2034 Frankfort Avenue, Louisville, KY 40206.
PUB TYPE	Statistical Data (110) -- Reports - Descriptive (141)
EDRS PRICE	MF01/PC11 Plus Postage.
DESCRIPTORS	Child Abuse; *Child Health; *Childhood Needs; Children; *Child Welfare; Delinquency; Early Childhood Education; Elementary Secondary Education; Mortality Rate; Sexual Abuse; *Social Indicators; State Programs; State Surveys; Statistical Surveys; Violence; Well Being; *Youth Problems
IDENTIFIERS	*Kentucky

ABSTRACT

This data book presents findings of the Kids Count project on current conditions faced by Kentucky children age birth through 19. For each county, and for the state, comparisons are provided between the base years of 1980-1982 and the most recent years 1992-1994. Counties are ranked against each other and trend graphs are provided for the studied indicators for all 120 counties. Indicators on physical well-being include infant mortality, prenatal care, teen births, and births to unmarried women. The report shows improvement in the infant mortality rate and the percent of births with prenatal care. Trends in births to teens are shown to vary by county, with births to teens showing a decrease and births to unmarried women showing an increase. Indicators concerning child neglect are broken down into incidences of physical abuse, sexual abuse, neglect, and dependency. Education indicators consist of dropout, retention, and transition rates for each school district. The final set of indicators concerns poverty and consists of numbers of children in the assistance programs of Aid for Families with Dependent Children (AFDC), Food Stamps, Supplemental Security Income (SSI), and Medicaid, as well as general employment statistics. These statistics suggest that poverty does have long term, far reaching effects on children. Studies have linked family poverty during childhood with greater risk for numerous problems including less effective parenting, lower intelligence as measured by IQ tests, homelessness, and exposure to crime. COUNTY DATA BOOK 1995

Prepared by Kentucky KIDS COUNT Consortium

Text by
Kentucky Youth Advocates

Data Analysis by
Urban Studies Institute
University of Louisville

Funded by the Annie E. Casey Foundation

December 1995

Acknowledgments

As always, the Kentucky KIDS COUNT report is a collaborative work of the Consortium. However, without the efforts of Michael Price at the Urban Studies Institute at the University of Louisville, the report would not have been possible. Michael, Martye Scobee, and other staff at the Urban Studies Institute assembled, entered, and analyzed all the data for the state and county pages. They also designed the county page format. We are also indebted to the agencies that so willingly provided us data for our report, including the Department of Education and the Cabinet for Human Resources. Debra Miller at Kentucky Youth Advocates wrote the introductory material and coordinated the dissemination process. Carol Straus at the University of Kentucky's Center for Business and Economic Research provided economic data included in this year's report. We are also indebted to the Children's Defense Fund and the Center for Budget and Policy Priorities, both in Washington, D.C., for their timely and thorough analysis of the federal budget and its impact on children in Kentucky.

Funding for this report and other activities of the Kentucky KIDS COUNT Consortium is provided through a grant from the Annie E. Casey Foundation in Baltimore, Maryland. The Annie E. Casey Foundation is a private charitable organization dedicated to helping build better futures for disadvantaged children in the United States. The Kentucky KIDS COUNT Consortium is part of the Casey Foundation's 50 state and national KIDS COUNT project. The guidance and support of Doug Nelson, Betty King, Bill O'Hare, and Jennifer Baratz, all of the Foundation, have been appreciated by the Kentucky KIDS COUNT Consortium.

This data book is the fifth annual county-by-county look at the status of Kentucky's children under this grant. Over the last five years, beginning in 1991, the Kentucky KIDS COUNT Consortium has published a series of reports, newsletters, and articles that profile the well-being of the youngest generation of Kentuckians. These publications, as well as other Consortium activities, seek to build a common commitment among Kentucky's citizens to improve opportunities and outcomes for children.

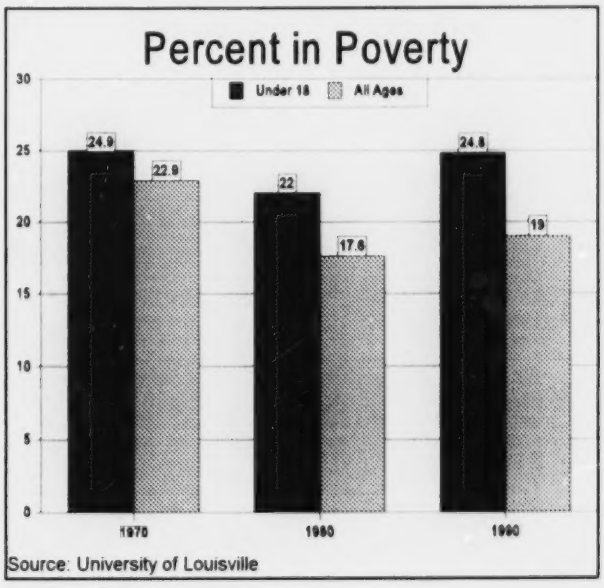
Keeping Our Promise To Kentucky's Children

Much of today's political debate is couched in terms of what is best for children and how to guarantee a bright future for the current generation of children. Adults generally agree that conditions for children are worse now than when they were growing up. Additionally, polling information indicates that the public is supportive of programs and policies that are designed to meet children's basic needs and provide better opportunities for them.

This Kentucky KIDS COUNT report examines selected state trends about the condition of children in the Commonwealth and some of the major indicators of need for children's services in our state. These data are presented for the state as a whole and for each of Kentucky's 120 counties. We then examine whether the political decisions currently under deliberation in Washington -- and soon to be discussed in Frankfort as well -- will keep our promises to children to meet their basic needs for food, shelter, health and education as well as to protect them from abuse and neglect.

Growing Poverty Puts More Children At Risk

A larger proportion of Kentucky children are poor than the general population. One in four Kentucky children live in families with incomes below the poverty line ($12,590 for a family of three in 1995), compared to one in five of all Kentuckians. Since 1970, the rate of poverty among children in Kentucky has grown faster than poverty rates for all ages. In every county in 1990 (the latest year for which accurate county poverty data are available) children's poverty now exceeds the general population.



Source: University of Louisville

Other data which were analyzed in last year's Kentucky KIDS COUNT report revealed that poverty rates are even higher for young families. Fully one third of all families with children with parents under 30 lived below the poverty level. For younger single mother families the poverty rate was 70.7 percent. This same report examined the working status of poor families with children. In 1990, for at least half of all poor families, parents reported that they were working or actively seeking work.

Funded by the Annie E. Casey Foundation

Studies Reveal Numerous Negative Impacts of Poverty on Children

The effects of poverty upon children are tremendous and irrefutable. Study after study has shown that poor children are more likely to suffer from health problems, ranging from stunted growth attributed to poor nutrition to severe physical and mental disabilities to severe asthma. Many critics of such studies attribute the conditions of poor children to other disadvantages such as single parenthood, low parent education, and other attributes more frequently observed among poor families. However, considerable evidence suggests that the lack of sufficient income alone handicaps children. Among the examples are:

- a recent report prepared by the Republican staff of the U.S. House Ways and Means Committee. Their survey of evidence from scientifically-designed, random-assignment experiments found that receiving more generous and better-designed income assistance was associated with a broad range of improved outcomes for children. Among the outcomes that improved were higher quality diets, better school attendance, and higher grades and achievement test scores.

- The U.S. Department of Education found that for every year a child spends in poverty his or her risk of falling behind in school increases. A report issued by the Education Department during the Reagan administration concluded that poverty's effects are separate from — and stronger than — those of race, region, having a teen parent, or living in a one parent home.

- The Children's Defense Fund cites studies that find poor children are two to three times more likely to drop out of school than non-poor children. This finding holds true when controlling for race, single parenthood, and parents' educational status.

- Poor children have significantly lower reading and math skills than nonpoor children regardless of factors such as mother's educational status, race, and marital status, also according to research summarized by the Children's Defense Fund.

These findings and other research work on children's well-being suggests that poverty does have long term, far reaching effects on children. Studies have linked family poverty during childhood with greater risk for numerous problems, including:

- stress on parents leading to less effective parenting, marital conflict, separation, and divorce;

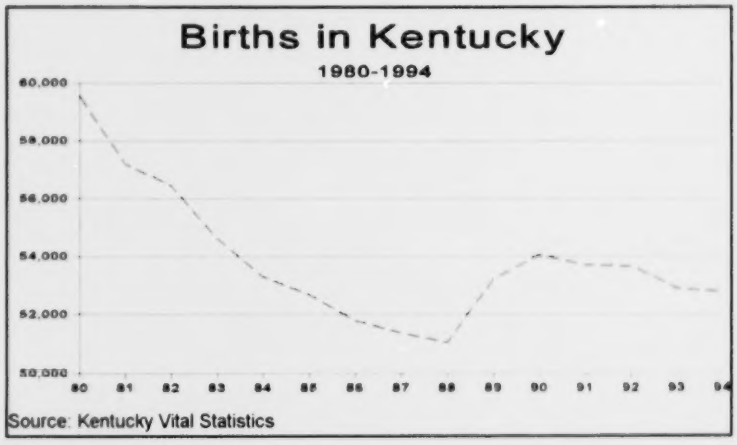
- poor nutrition leading to birth defects, lower birth weights, and lower

intelligence as measured by IQ tests;

- housing problems such as homelessness, frequent moving and disruption of education, exposure to lead based paints, and utility shut-offs;
- worse neighborhoods with inferior schools, and exposure to crime; and
- fewer resources for learning outside of school such as inferior child care, fewer extracurricular activities and stimulating family activities, and financial barriers to college.

An Increasing Population of Children Requiring Services

After a decade of dramatic decline in the numbers of children in Kentucky, the trend has begun to change in the 1990s. From 1990 to 1994, the total number of Kentucky children under six has grown by three percent. The number of live births in the state declined precipitously in the 1980s, reaching its lowest point in 1988. Since that year however, the numbers of infants born has risen somewhat, accounting for the growing numbers of children under six.



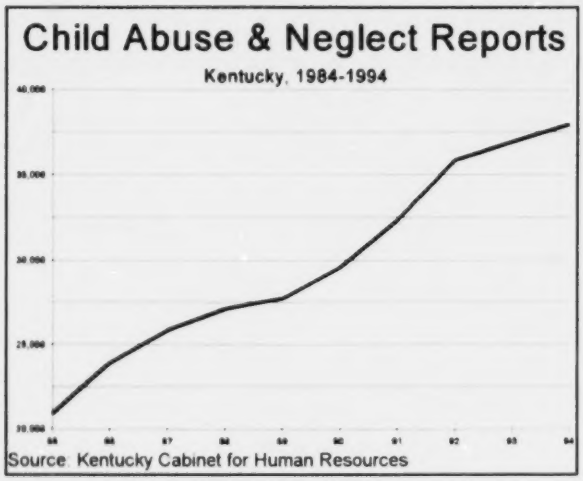
Source: Kentucky Vital Statistics

These growing numbers of children will begin attending Kentucky's public schools in the very near future and will put additional financial strain on the education budget for the state. In addition, these younger children are even more likely to be poor.

Increasing Child Abuse and Neglect Points to More Need for Protection

Child abuse and neglect are not confined to any one economic strata, although neglect is often a result of economic conditions that prevent parents from providing adequate shelter, food, and other care for children. However, to the extent that some child abuse is the product of frustration and stress on the part of parents, economic circumstances can certainly play a role.

The number of reports for child abuse and neglect in Kentucky has increased almost two fold in the last ten years, up from 20,908 in 1985 to 37,911 in 1994. The percentage of reports "substantiated" (where adequate evidence is found to support the allegation) has remained about constant at just less than 50 percent.



In a recent report completed by an advisory group to the Secretary of the Cabinet for Human Resources, several reasons were cited for the increased numbers of children requiring protection:

- increased public attention to child abuse and neglect has increased reporting;
- fuller recognition that child sexual abuse is a violent act with devastating short and long term consequences for children; and
- dramatic increases in reporting spouse abuse, where child abuse often occurs as well.

Kentucky's increasing reports of child abuse and neglect are part of a national trend. The U.S. Advisory Board on Child Abuse and Neglect concluded in 1990 that a national emergency and a moral danger exists and that our country's child protective system is failing.

Overall, growth in the rate of poverty among children, coupled with some growth in the numbers of young children in our state, whether poor or nonpoor, and more child abuse and neglect, point to an increased need for assistance if Kentucky's children are to be properly fed, housed, educated, and protected.

1995 KIDS COUNT Indicators of Children's Well-Being

Besides poverty among children, the indicators of children's well-being that we examine in this KIDS COUNT report are: infant mortality rate, prenatal care, teen birth rate, and births to unmarried women. For each county, and for the state, three year running averages are provided for the base years of 1980-1982 and for the most recent years 1992-1994. Counties beginning and end points are ranked against each other, with one

being the best. In addition, trend graphs are provided for the four indicators, comparing each county with the statewide trend. These indicator data provide glimpses of both the level of need among Kentucky's children and the degree to which those needs are being met.

Kentucky has significantly improved its infant mortality rate and the percent of births with first trimester care. Kentucky's infant mortality rate is considerably better than other southern states. In fact, Kentucky ranked 22nd in the nation in the 1994 National KIDS COUNT Data Book. One reason for the dramatic improvement in infant mortality rates is the relatively high percent of births with first trimester prenatal care. Beginning in the mid 1980s Kentucky decision-makers adopted policies to provide prenatal care to indigent pregnant women, using a combination of federal and state funds. As eligibility was expanded, the percent of births with first trimester care has increased. Generally, county trends follow the direction of the state trends, with increased variability due to smaller population sizes. Another reason for the improvement of the infant mortality rate in Kentucky, and elsewhere, is improved health technology. Kentucky has developed a regionalized system of care for critically ill infants providing improved access to highly skilled practitioners and specialized care.

Births to teens aged twelve through seventeen have declined in Kentucky since 1980. However, since the low rates in the late 1980s, birth rates to teens under 18 have increased somewhat, but remain below rates in 1980 and preceding years. Trends for counties vary considerably both in the general direction of the trend and in relationship to the state rate.

While births to younger teens are down from their 1980 level, births to unmarried women have increased in Kentucky. For the 1992-1994 time frame, more than one in four births was to an unmarried woman. County data follow the upward state trend, with the populous urban counties of Jefferson and Fayette posting rates above the state average.

This KIDS COUNT report also provides one point in time data about child abuse and neglect for the state and each county, including total numbers of children reported and substantiated abused and neglected. Further, the data is broken down into incidences of physical abuse, sexual abuse, neglect, and dependency. One child may be included in more than one category of maltreatment.

Education data reported for the 1993-94 school year includes dropout, retention, and transition rates for each school district and the state average for comparison purposes. The dropout rate is the percentage of students in grades 7-12 who do not graduate or return to school the following year. The rate does not include students who transfer to another school but does include students who complete one year of school and drop out over the summer. The retention rate is the percent of students, grades 4-12, who

do not advance to the next grade level or graduate. The transition rate is the percent of students graduating from high school who go on the next year to further education or employment as reported by school officials.

The section entitled "Poverty Program Data" is also point in time data that display the numbers of children and their percentage of total caseload in the major "safety net" programs, Aid for Families with Dependent Children (AFDC), food stamps, Supplemental Security Income (SSI), and Medicaid. Except for SSI, children typically make up half or more of the caseloads of these programs. The reader could also calculate the percent of children receiving various assistance in any county by dividing by the number of children in the county.

Kentucky's Economy Has Many Families Running In Place

Poverty is of course only one measure of the state's — and a county's — economy. Other measures include numbers of jobs, average wage per job and unemployment rates. These data are provided in the full report for the state as a whole and for each of Kentucky's a 120 counties.

The state data tell us that the average wage or salary per job, when adjusted for inflation, has actually fallen slightly between 1980 and 1993. The average (or mean) wage and salary in Kentucky in 1980 was $23,000 and is $22,725 in 1993. County averages tend to follow the state trend, but in some cases are significantly above or below the state average or cross the state average.

The unemployment rate in Kentucky peaked in 1991, at the height of the most recent recession, and now stands at 6.2 percent for the state, somewhat higher than the pre-recession level in 1990. County unemployment rates also tend to follow the same pattern related to the recession. Unemployment counts only those persons who are out of work and actively seeking a job. The figures do not include those persons who are classified as "discouraged" workers, those out of work but no longer seeking work. As a result, official unemployment rates may grossly under represent individuals who need work, particularly in rural areas where the employment opportunities are limited and people know that the search for work is likely to be fruitless.

The number of jobs in Kentucky has risen overall between 1980 and 1993, reaching over two million jobs in 1993. However, according to experts, the increase in the numbers of jobs has been accompanied by an increase in the numbers of part-time jobs, often with few or no benefits for employees. Increasingly parents in families with children are holding down multiple jobs in order to make ends meet.

Federal/State Partnerships to Assist Poor Children and their Families

Beginning with the New Deal under President Roosevelt, the federal government entered into a partnership with states to provide a basic level of economic security for poor children. This assistance took the form of the Aid for Families with Dependent Children (AFDC) program, essentially established to help families where the father was missing or unable to provide financial support. Today in Kentucky, the federal government bears about seventy percent of the cost of this program.

The "safety net" for poor children was extended in the sixties when the federal government began the food stamp program to provide a minimal level of nutrition for poor individuals and families. At this time, the costs of this program in Kentucky are borne entirely by the federal government. As the War on Poverty was waged, the Medicaid program was also instituted to provide health care for indigent individuals. Again, the federal government entered into partnership with states, matching state expenditures with federal expenditures. Poorer states such as Kentucky received favorable match rates, encouraging the state to expand coverage to needy persons but sharing the cost with the federal government. Like the AFDC program, Kentucky receives seven dollars from the federal government for each three we spend.

The Supplemental Security Income (SSI) program provides financial assistance to low income individuals with disabilities. For low income families with children with disabilities, this program provides supplemental income to meet the added expenses of caring for a child with disabilities. The SSI program is entirely administered and funded by the federal government.

In a move to "help families that help themselves," the federal Earned Income Tax Credit (EITC) was established during the Reagan administration in the 1980s to provide tax relief to low income working families with children. This refundable tax credit was designed to help bring the family income of very low wage workers up to the poverty level. The amount of tax relief and the number of families eligible have been expanded since the inception of the program. For instance, certain low income workers without children were added to the eligible population in 1994. For tax year 1994, it is estimated that the federal EITC refunded $321.6 million to over 297,000 Kentucky families or individual workers.

New Federal Policy Directions Translate to Less Help for Kentucky's Children

A major reshaping of both the nature and extent of federal assistance available to states to meet governmental expenses is underway. As Congress and the President continue to seek an agreement on the federal budget for Fiscal Year 1996 (which began on October 1, 1995), it appears clear that states like Kentucky can expect less federal funding in the future. It is important to recognize that the federal budget cuts affect

Kentucky less in 1996 than in the 2002 when the federal budget is scheduled to be balanced. The most recent information available from the Center on Budget and Policy Priorities in Washington, D.C. estimates that in the current year Kentucky could face the following cuts in federal aid:

- Kentucky would receive federal grants that are $319 million less (about 10 percent less) than could be expected under current law.
- To make up for the loss of federal grants, Kentucky would have to increase its sales tax revenue by more than 19 percent (an addition of more than one penny to the 6 percent sales tax today).
- The lost federal aid would amount to 12 percent of anticipated state spending on primary and secondary education.
- The loss of federal aid would amount to $82 per person in Kentucky.

In fiscal year 1998, the second time the General Assembly will be setting a biennial budget under the new federal/state partnership, Kentucky could face the following cuts given the seven year target for a balanced federal budget:

- Federal grants would be $713 million less than under current law.
- To make up for the loss of federal grants, Kentucky would have to increase the sales tax, personal income tax, and corporate income tax each by 16 percent.
- Lost federal aid would amount to three times spending on corrections in Kentucky.
- The loss in federal aid would amount to $181 per person in Kentucky.

When fully implemented in 2002, cuts in federal aid would have shifted a large portion of the cost of balancing the federal budget onto state and local governments in Kentucky.

- Federal grants would be $1.6 billion less than under current law.
- To make up for the loss of federal grants, Kentucky would have to increase the sales tax, personal income tax, and corporate income tax each by 30 percent.

- Lost federal aid would amount to 36 percent of state spending on primary, secondary, and higher education combined.

- The loss of federal aid would amount to $402 per person.

The cumulative loss of federal aid to Kentucky state government over the seven year period would be $6.7 billion.

The Effect on the Lives of Kentucky Children

The loss of federal funding raises very real questions about whether the current safety net programs will still be in place to catch children in need. Or, will the Kentucky General Assembly repeal or weaken guaranteed assistance for poor, hungry, ill, disabled, abused, or neglected children? The likely answer is that hundreds and thousands of Kentucky children will suffer harm under these new public policies.

Again because agreement has not been reached on the federal budget, exact numbers are unavailable. However, the Children's Defense Fund and the Center for Budget and Policy Priorities have prepared estimates of the numbers of Kentucky children who will be affected by the reformulated federal/state partnership.

The current proposals under consideration for the AFDC program would cap spending, not providing additional federal money based on rising poverty or recessionary effects. If a recipient is limited to a lifetime cumulative maximum of five years on AFDC, an estimated 59,000 children in Kentucky would be denied

How to Figure the Federal Budget Cuts for Your County

You can calculate the impact of the federal budget cuts in your county for the following programs:

- o AFDC
- o food stamps
- o SSI

For each of the programs, figure the proportion of the total state child caseload in your county by dividing your county caseload number by the state caseload number. Multiply the state impact figures provided in this report (or provided by other sources) by the proportion of children in your county in the appropriate program.

For example, to figure the numbers of children in Adair County who may be hurt by the proposed AFDC changes described in the paragraphs to the left and on the next page, follow these steps:

1. Turn to the back of the Adair County page and find the number of children receiving AFDC: 659

2. Turn to the back of the Kentucky page and find the number of children receiving AFDC: 129,644

3. To find the proportion of children who are from Adair County, divide 659 by 129,644:
659 ÷ 129,644 = .0051 or .51%

4. From the the paragraphs to the left and on the next page, find the impact of various federal proposals on Kentucky. (You may find impact statements from other sources as well.) Under the 5 year limit proposal, 59,000 Kentucky children would be denied AFDC benefits. Multiply the state impact by the proportion of children in your county:
59,000 x .0051 = 301

5. The county impact: 301 Adair County children would be denied AFDC benefits in 2002 under the Congressional plan for a five year cumulative limit in lifelong AFDC benefits to families.

assistance in FY 2005. If Kentucky chose a two year limit, an estimated 150,698 children would be denied assistance. The "family cap" provision (a lifelong prohibition of benefits to children born to a mother while she is receiving assistance) would deny AFDC to an estimated 40,000 Kentucky children.

Funding reductions in food stamps mean that 239,000 children and their families would receive $10 million less in food stamps over seven years than current law provides. The changes in the SSI program mean that 5,200 Kentucky children would be denied all assistance in 1997.

The reductions in the Medicaid program are much more difficult to estimate because each state will have much flexibility in implementing reductions. In seven years, Kentucky could face as much as a 35 percent reduction in federal funding. This reduced funding would more than likely translate into some combination of reduced eligibility (fewer children served) and a reduction in the types and amounts of services covered and provided.

The latest proposal regarding the federal Earned Income Tax Credit (EITC) would remove from eligibility 3.3 million low income families with children and 4.3 low income workers without children nationally, taking $32.5 billion from these families over seven years. According to a U.S. Treasury estimate, an earlier proposal that would have cut a total of $43.5 billion nationally by 2002, would cost Kentucky taxpayers $85.7 million. Under that plan, 250,590 low income Kentucky taxpayers would lose an average of $342 in tax credits by 2002.

What Will Happen in 1996 and Beyond?

Perhaps the most important change under the proposals being considered at the federal level is the loss of "entitlement" to assistance currently extended to poor children and their families. The Children's Defense Fund puts the issue succinctly: "an entitlement is assured help — an unbreakable promise the federal government makes to its poor and disabled children, its elderly and its citizens wherever they live in times of need. . ." More technically, an "entitlement" is a legal guarantee of services for all those who meet certain guidelines.

As the federal government moves away from the promises it has made to children in Kentucky — and in every state — the life and death question becomes who will assure that children are nurtured and protected when their families cannot. Will elected and appointed officials in Frankfort? Will local governments? Will citizens? And, most importantly, if we break these promises, what will become of the children disillusioned and left behind?

Definitions, Methodology, and Data Sources

The 1995 Kentucky KIDS COUNT Data Book uses multiple data sources to present a portrait of children and their families in the state and its 120 counties.

POPULATION AND POVERTY DATA

State and county populations for 1980 and 1990 are taken from the U.S. Census of Population and Housing for the appropriate year and reflect persons residing in Kentucky on April 1 of those years. The 1994 populations are a disaggregated estimate provided by the Urban Studies Institute, University of Louisville. Percent changes from 1980-1990 and 1990-1994 are also calculated.

Live Births 1980, 1990, and 1994

All birth data are taken from vital statistics data provided by the Cabinet for Human Resources. Percent changes from 1980-1990 and 1990-1994 are also calculated.

Percent in Poverty

Poverty statistics display the percent of all persons and children under 18 who lived below the designated federal poverty line for 1970, 1980, and 1990. The data are all taken from the U.S. Census files for the appropriate years.

INDICATOR TRENDS

Four selected trends about the conditions of children are highlighted for the state as a whole as well as for each county. Counties are ranked against each other on these indicators for the years 1980-1982 and 1992-1994. A rank of one is the best. The graphs show trends over time for the four selected indicators.

Three-year running averages are used because Kentucky has many counties with small populations. However, in small counties, changes in vital statistics over time should be interpreted with some caution. Using three-year averages reduces but does not eliminate the likelihood of statistical aberrations.

Infant Mortality Rate

The number of infant deaths (children less than one year old) in a three-year period was divided by the total number of live births in the three-year period and converted to thousands. The infant mortality rate reflects the number of infants who died per thousand

births. The rates are ranked for 1980-1982 and 1992-1994 and graphed using three-year running averages for years from 1980-1994.

Prenatal Care

The total number of women receiving prenatal care in the first trimester of pregnancy, as determined from birth certificates, was divided by the total number of live births and converted to a percentage. Three-year averages are ranked for 1980-1982 and 1992-1994. The graph displays annual data from 1980 through 1994.

Teen Birth Rate

The total number of births to females 17 and under was divided by the total population of females 12 through 17 years old. The resulting rate reflects the number of births per 1,000 teens between and including the ages of 12 and 17. (Readers are cautioned that the teen birth rates reported in other sources are usually for teens 12 through 19 and so are not comparable.) Three-year averages are ranked for 1980-1982 and 1992-1994. The graph displays annual data from 1980 through 1994.

Births to Unmarried Women

The total number of births to unmarried women, as determined from birth certificates, was divided by the total number of live births and converted to a percentage. Three-year averages are ranked for 1980-1982 and 1992-1994. The graph displays annual data from 1980 through 1994.

ECONOMIC DATA

The table shows 1993 data for jobs by place of work (in other words, the Adair County figures reflect the number of jobs in Adair County regardless of the county residence of the individuals who hold those jobs) and wage and salary per job in that county. These data are from the Regional Economic Information System (REIS) CD-Rom published by the Bureau of Economic Analysis (BEA) of the U.S. Department of Commerce. The mean wage and salary data in the graph was adjusted for inflation to 1993 dollars using the consumer price index. Unemployment data were provided by the University of Kentucky Center for Business and Economic Research. The data are benchmarked to the 1993 Current Population Survey (CPS).

CHILD ABUSE DATA

The child abuse and neglect data are taken from annual data compiled by the Department for Social Services, Cabinet for Human Resources. The total number of

children reported and substantiated is an unduplicated count. The incidences reported and substantiated may count a child more than once for various types of abuse and neglect. A report is considered substantiated after state officials complete an investigation and determine that further action is justified to protect the child. Definitions of physcial abuse, sexual abuse, and neglect are commonly understood. Dependency refers to a child who is under improper care in a situation that is not due to an intentional act of the parent or other person exercising custodial control of the child.

POVERTY PROGRAM DATA

Aid to Families with Dependent Children (AFDC)

The numbers of persons and children are monthly averages for the fiscal year 1995 (July 1994 - June 1995) taken from data compiled by the Department for Social Insurance, Cabinet for Human Resources. The percentage of children was calculated from these data.

Food Stamps

The numbers of persons and children are monthly averages for June 1995 taken from data compiled by the Department for Social Insurance, Cabinet for Human Resources. The percentage of children was calculated from these data.

Supplemental Security Income (SSI)

The numbers of persons and children are monthly averages for December 1994 from data compiled by the U.S. Social Security Administration. The percentage of children was calculated from these data.

Medicaid

The numbers of persons and children are monthly averages for the fiscal year 1994 (July 1993 - June 1994) taken from data compiled by the Department for Medicaid, Cabinet for Human Resources. The percentage of children was calculated from these data.

EDUCATION DATA

All education data are reported from the school year 1993-94 from information received from the Kentucky Department of Education. Dropout rates measure the percentage of students enrolled in grades 7-12 who do not enroll the following year and have not graduated or transferred to another school. Retention rates are the percentage of students in grades 4-12 who do not progress to the next grade level or graduate. (The primary years are not included in the retention measure.) Transition rates measure the

percentage of graduates who are pursuing further education or are employed, either full or part time. The expenditures per pupil is the total expenditures from all sources in a school district divided by the total enrollment for the year.

THE KENTUCKY KIDS COUNT CONSORTIUM

Kentucky KIDS COUNT is a unique consortium of researchers and children's activists who have significant expertise in the aggregation, interpretation, and use of data to impact public policy. The Consortium's work includes producing a series of reports on children and families to publicize the needs of children, influence budget and programs decisions, and monitor state and local performance for children.

The Kentucky KIDS COUNT Consortium is part of the national KIDS COUNT project of the Annie E. Casey Foundation in Baltimore, Maryland. The Foundation publishes a national report each year and funds groups to publish data reports on the status of children in their states.

The Consortium includes individuals from three Kentucky universities and one statewide child advocacy organization. The members of the Consortium are:

Ronald Crouch
Director, Kentucky State Data Center,
Urban Studies Institute, University of Louisville;

Lorraine Garkovich, Ph.D.
Professor, Department of Rural Sociology,
College of Agriculture, University of Kentucky;

Gary Hansen, Ph.D.
Associate Professor, Department of Rural Sociology,
College of Agriculture, University of Kentucky

Debra Miller
Deputy Director, Kentucky Youth Advocates

Betty Olinger, Ph.D.
Assistant Vice President, Academic Affairs,
Kentucky State University

Michael Price, Ph.D.
State Demographer, Urban Studies Institute,
University of Louisville

David W. Richart
Executive Director, Kentucky Youth Advocates

Carol M. Straus
Senior Research Associate,
Center for Business and Economic Research, University of Kentucky

Stephan M. Wilson, Ph.D.
Associate Professor, Family Studies
Research Center for Families and Children, University of Kentucky
